## Fence Intelli

Whenever the highest security requirements for Perimeter Protection are called for, the IntelliFence offers the perfect security package, providing a combination of mechanical protection together with an electronic detection system.

Due to its special configuration IntelliFence can also be raked to suit even steep ground slopes without any problems.

The modular construction of the IntelliFence System enables the retrofitting of an existing SIGURA, TOP or MIDI fence. IntelliFence is the ideal solution to secure premises of car dealers, building centers, beverage stores, as well as high security areas etc.

## Gate Atlas I

ATLAS I closes the gap of the flexible construction possibilities between ADRONOVA and ATLAS II.

With an access width of up to 8,00 m ATLAS I secures your entrance in an absolutely reliable way. Choose your suitable gate infill out of the wide range available.

For a perfect looking protection all RAL colours may be chosen.

## Round posts

Round posts in combination with chain link fencing are a very economical solution and ideal if the fence is not exposed to great mechanical forces.

## Fence Uni

The steel cage fence UNI constitutes an ideal synthesis between proven robustness and timeless elegance. Its wide range of applications makes this fence type so versatile it can be used universally, for example in industry.

Due to its design and the option of various colours the steel cage fence UNI is a real trendsetter. Grid size 50 / 200 mm, round rods 6 mm (other grid sizes upon request).

## Fence Top

The steel cage fence TOP complies with highest safety standards and offers an ideal solution between proven toughness and necessary flexibility.

The variable fence elements can be stepped to suit even steep ground slopes and most difficult terrain.

## Gate Swing

The conventional gates SWING, SWING-L ARTE and SWING-L-FLEX are highly functional and rich in design variations as they can be equipped with different infills.

The SWING-L-FLEX gates are very flexible regarding their use as the opening direction can for example be decided upon when installing the gate.

## Gate Atlas II

The self-supporting sliding gate ATLAS II guarantees sovereign safety up to 14 m opening width.

Due to its robust built quality it does not leave anything to be desired. Naturally it can be operated manually in case of power failure.

## Gate Titan

The self-supporting sliding gate TITAN operates almost silently and offers security for an opening width of up to 17 m.

Whether sloping ground has to be traversed or special infills are desired, the sliding gate TITAN is the right choice, preferably with the power-driven option.
